

Plain and simple data merging *between* FileMaker Pro® and MS Office®.

EZxslt for Word 1.5 Product Licensing Options

EZxslt is licensed for Workgroups, to Consultants, and to Developers.

If you build solutions for your own company, you probably need a Workgroup License. Workgroup licenses are for organizations that have multiple people who will be creating or using EZxslt generated stylesheets. Workgroup licenses are sold based on the number of copies (licenses) of FileMaker Pro in your organization, and include the right to redistribute both the EZxslt application and the resulting stylesheets to all members of your licensed workgroup.

If you develop custom solutions for other people or organizations you should purchase our Consultant License. A Consultant License for EZxslt includes the EZxslt tool for Windows and Macintosh, plus the right to deploy EZxslt generated Stylesheets to an unlimited number of organizations provided they have ten or less FileMaker Pro Users each. Organizations with 11 or more FileMaker Pro users will need to acquire the appropriate Workgroup License for their needs.

If you develop a shrinkwrap solution or otherwise resell a package, and you wish to deploy EZxslt Stylesheets along with your solution, simply purchase the appropriate developer license based on the number of copies of your solution that you plan to deploy.

Support is provided via email to a single contact person for each license. All licenses include versions for Macintosh Classic, Macintosh OS/X, and Windows.

Quickly and easily use XML to create formatted Microsoft Word documents using FileMaker Pro 6-based data!

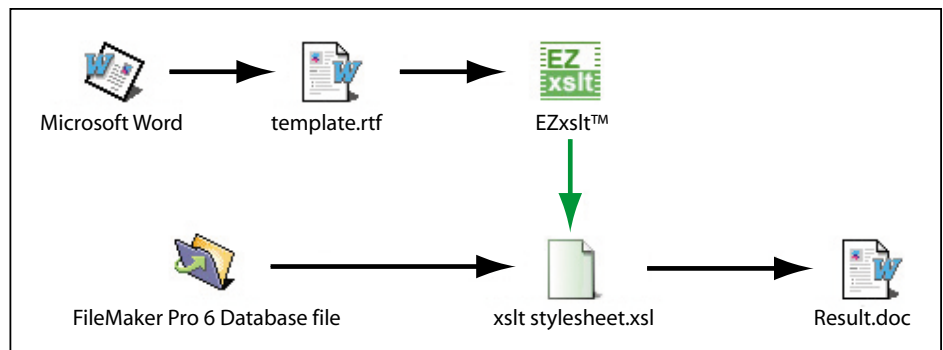

Three easy steps are all it takes:

1. Create a template in Microsoft Word.
2. Use EZxslt to create a new XSLT stylesheet based on your template.
3. Use the Stylesheet, along with FileMaker Pro 6 to output formatted Word documents, automatically if you wish!

Microsoft Word document templates into XSLT stylesheets. Once you've set it up, you and your users will be able to press a button in FileMaker Pro and see a properly formatted document show up in Microsoft Word for the current found set.

EZxslt helps you do the work

EZxslt includes built-in help and a tutorial that walks you through all the steps, from creating a

EZxslt automates the process of merging Filemaker variable data into MS Word documents.

You don't need to know XML

You do not need to know anything about XML or XSLT to use this product! You simply need to want to get more useful work done in a hurry. Start using EZxslt, and in no time you'll be creating properly formatted:

- Mail Merge letters
- Contracts
- Service Orders
- Manuscripts
- Proposals

...and other documents that are difficult to create in FileMaker Pro using its native tools.

EZxslt is designed to work as a drag & drop utility to make it fast and easy to convert your

Microsoft Word template to configuring a FileMaker Pro 6 ScriptMaker script that automates the process. If you are a FileMaker Pro advanced user or developer, you'll find the XSLT stylesheets generated by EZxslt very useful examples for how to leverage the new XML capabilities in FileMaker Pro 6 for more than just FileMaker Pro to RTF transformations.
